

The flexible, intelligent room status monitoring system that makes healthcare clinics run more efficiently...

Clinic-Call™

by Tech Works™

The best healthcare clinics today combine excellent care with maximum efficiency. That's why, in planning your healthcare clinic, you want a room status monitoring system that simply and effectively manages room assignments and patient flow so that your medical staff can be free to focus on providing care.

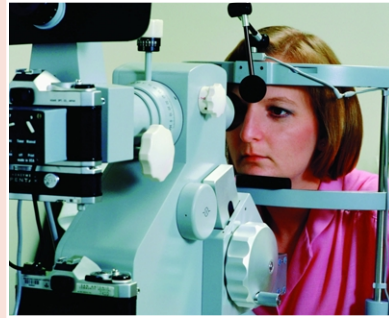

Only Clinic-Call™ delivers a fully-featured system that can flexibly adapt to your clinic's needs, and can easily be modified or upgraded as your needs grow and change.

expand, modify or relocate than conventional systems.

Additional components serve special needs.

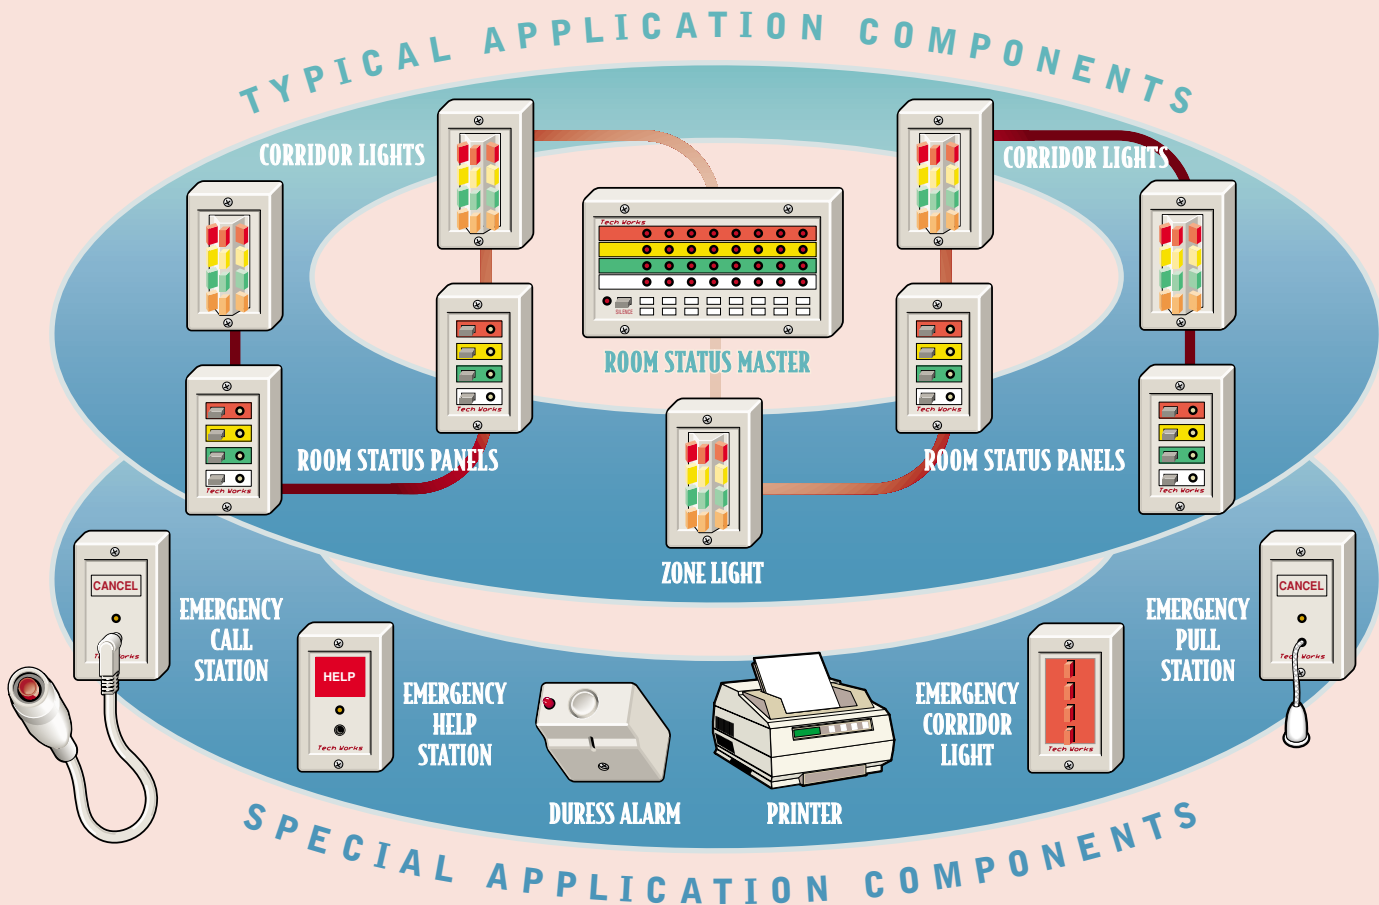

With Clinic-Call™, you can easily integrate additional components, such as wall-mounted *emergency help buttons* for high-stress environments, handheld *emergency call* devices for patients undergoing dialysis or other procedures that limit mobility, *emergency pull stations* for bathrooms, *dilation timers* for ophthalmic clinics, and silent *duress alarm systems* for mental health clinics or other environments where patients might become violent. Attach a

desktop printer and all system activity can be documented, reducing clinic liability. If necessary, Clinic-Call™ can even interface with pocket pagers, cordless phones, staff and patient location devices, smoke detectors, intercoms, wireless and infrared tracking systems and personal computers.

Clinic-Call™ is a tested, reliable system that won't break your budget.

All Clinic-Call™ components are *UL-approved* and designed to withstand the punishing demands of the busiest healthcare environments. Built entirely of *solid-state components*, Clinic-Call's™ power consumption is very low, and its solid-state lights never need replacing. Clinic-Call™ components fit *standard electrical fittings*. Their low profile and neutral color allow them to fit any décor. Clinic-Call™ is priced to fit the smallest environments, yet it is *expandable up to 4,096 rooms!*

Clinic-Call™

by Tech Works™

This easy-to-use system provides expert room management.

A simple system of steady or flashing colored lights provides expert room management information in a “silent language” that clinic staff can easily understand. *Corridor lights* signal room status in all directions from up to 50 feet away. The push of a button on a conveniently-located *room status panel* is all that is needed to trigger a status change. A quick glance at a *room status master* panel shows which rooms are available, which are occupied, where practitioners are busy with patients and where they will be needed next. In the event of an emergency, Clinic-Call™ flashes a *call-for-help*, which can be echoed along with an *audible alarm* by optional *zone lights* that report the status of an entire suite or corridor.

Simple programmable components form a powerful system.

Clinic-Call™ starts with a few basic elements — color-coded corridor lights and status panels that are easy to understand. Press a color-coded button and the matching colored lights change. Colors can be programmed to represent different room conditions (i.e. *room ready*, *patient waiting*, *chart ready*, *help needed*) or different healthcare providers. The power of Clinic-Call™ is in the many ways these simple elements can be combined to form an intelligent system.

In one popular configuration called “*doctor follow*,” for example, a rapidly flashing light outside an examining room shows the doctor’s current location. As he leaves the room, a slow-flashing light signals the room where he is needed next. Using a “*patient arrival*” system, doctors are silently informed that their patients

are in the waiting room. When programmed for “*chart up*,” Clinic-Call™ signals the need to retrieve a patient’s chart or x-rays. Using “*chart drop*,” Clinic-Call™ signals that both patient and chart are present when the chart is dropped in the bin outside an examining room. Clinic-Call™ can even be used as a “*doctor register*” to track physician arrivals and departures.

These are only a few of many possible programming configurations that can be created for Clinic-Call™. An authorized Tech Works systems engineer will work with you to design a custom system to fit your clinic’s needs.

Easy to install, modify or relocate, Clinic-Call™ expands to meet your needs.

We build intelligence into every Clinic-Call™ component so that wiring can be kept simple. A *twisted-pair cable* running from room to room connects all the Clinic-Call™ components, even if they are running different programs. To add a new component, just drop it into a convenient place in the chain! Deleting a component is just as simple. That makes Clinic-Call™ easier to install and less costly to

Clinic-Call™

The intelligent choice in room status monitoring systems
that makes healthcare clinics run more efficiently.

Simple

An easy-to-learn system of color-coded lights and buttons provides clinic staff with complete information.

Effective

Silently manages room assignments and priorities so healthcare professionals can focus on patient care.

Programmable

Design powerful routines like "doctor follow," "patient arrival," "chart up," "chart drop," and "doctor register."

Customizable

Create custom programs to meet your special needs. Multiple programs can run along the same set of wires.

Flexible

Choose the most appropriate components for your needs. New options can be seamlessly integrated into your system as soon as they are available.

Accountable

A desktop printer can record all patient calls and staff responses with date and time, limiting your liability.

Affordable

Intelligent components on twisted-pair cable makes this system simple to install and easy to modify, expand or relocate.

Expandable

A single system accommodates up to 4,096 rooms, including up to 16,384 user interface devices.

Cost-Effective

Built entirely of solid-state components, Clinic-Call™ consumes little power; status lights never need replacing.

Reliable

Clinic-Call™ components are UL-approved and built to last in punishing environments.

Available

Clinic-Call™ is available now. Call us for a qualified systems integrator near you.
